Techniques: Application of systems biology to absorption, distribution, metabolism, excretion and toxicity

Ekins, S. / Nikolsky, Y. / Nikolskaya, T. / Trends in Pharmacological Sciences, Apr 2005

It is widely recognized that either predicting or determining the absorption, distribution, metabolism, excretion and toxicity (ADME/Tox) properties of molecules helps to prevent the failure of some compounds before they reach the...
schedule or rate of decrease, the more likely the algorithm is to find an optimal or near-optimal solution.

**Superparamagnetic clustering:**
This method assigns a ‘spin’ to each node and spins in a highly connected cluster fluctuate in a correlated fashion, which is used to identify these nodes.
